

List of Variables and Fields Used by the MetGIS long-range Point API

The forecast interval of the variables is determined by [ForecastDates_Utc](#).

The naming of the fields that contain the physical unit of a given variable follows the `<variable-name>_Unit` pattern.

ForecastDates_Utc

In the monthly forecast, the date represents the time interval of the entire month, e. g. 2023-08-01 represents Aug 2023.

In the daily forecast, the date represents the time interval from 0 to 24 hours UTC on that day.

TemperatureMin

Minimum air temperature 2 meters above ground, in the given time interval, for one specific ensemble run considered in the CFS downscaling process.

Temperature5thPercentile

5th percentile of the air temperature 2 meters above ground at the specified time, derived from all ensemble runs considered in the CFS downscaling process.

Temperature25thPercentile

25th percentile of the air temperature 2 meters above ground at the specified time, derived from all ensemble runs considered in the CFS downscaling process.

TemperatureMean

Mean air temperature 2 meters above ground, in the given time interval, for one specific ensemble run considered in the CFS downscaling process.

Temperature75thPercentile

75th percentile of the air temperature 2 meters above ground at the specified time, derived from all ensemble runs considered in the CFS downscaling process.

Temperature95thPercentile

95th percentile of the air temperature 2 meters above ground at the specified time, derived from all ensemble runs considered in the CFS downscaling process.

TemperatureMax

Maximum air temperature 2 meters above ground, in the given time interval, for one specific ensemble run considered in the CFS downscaling process.

TemperatureMeanAnomaly

Departure of the air temperature 2 meters above ground from the 30-year average, in the given time interval.

PrecipitationRate5thPercentile

5th percentile of the precipitation rate at ground surface in the respective interval, derived from all ensemble runs considered in the CFS downscaling process.

PrecipitationRate25thPercentile

25th percentile of the precipitation rate at ground surface in the respective interval, derived from all ensemble runs considered in the CFS downscaling process.

PrecipitationRateMean

Mean precipitation rate, in the given time interval, for one specific ensemble run considered in the CFS downscaling process.

PrecipitationRate75thPercentile

75th percentile of the precipitation rate at ground surface in the respective interval, derived from all ensemble runs considered in the CFS downscaling process.

PrecipitationRate95thPercentile

95th percentile of the precipitation rate at ground surface in the respective interval, derived from all ensemble runs considered in the CFS downscaling process.

PrecipitationRateMeanAnomaly

Departure of the precipitation rate from the 30-year average, in the given time interval.

DownwardShortWaveRadiation

Mean downward short wave radiation, in the given time interval, for one specific ensemble run considered in the CFS downscaling process.
