

# Transition guide from the old Point API to the new one

- The new Point API endpoint is `https://point-api.metgis.com/forecast` instead of `https://api.metgis.com/forecast`.
- Your existing API key is valid for the new Point API, too.
- The `winter` package was renamed to `coldweather`.

## starter package

- The momentary wind values in `Forecast_daily` were replaced by aggregated or derived values:
  - `WindDirection` -> `WindDirectionAtMaxSpeed`
  - `WindStrength` -> `MaximumWindStrength`
- Changes in the names only:
  - `TemperatureMaximum` -> `MaximumTemperature`
  - `TemperatureMinimum` -> `MinimumTemperature`
  - `WindSpeedMaximum` -> `MaximumWindSpeed`
  - `WeatherDescription` -> `ShortText`
- `WindDirection` and `WindDirectionAtMaxSpeed` are now translated into the language given by the `lang` parameter, or German by default; see `<ParameterName>_usedValues` in the JSON response for the possible values.

## smart package

- The momentary wind values in `Forecast_daily` were replaced by aggregated or derived values:
  - `WindDirection` -> `WindDirectionAtMaxSpeed`
  - `WindStrength` -> `MaximumWindStrength`
- Changes in the names only:
  - `SunRise`, `SunSet`, `MoonRise`, and `Moonset` were renamed to `Sunrise`, `Sunset`, `Moonrise`, and `Moonset` respectively.

- `SunshineDuration` was renamed to represent the aggregation period, for example `SunshineDuration_dailySum` or `SunshineDuration_6hourlySum`.
- `TemperatureMaximum` -> `MaximumTemperature`
- `TemperatureMinimum` -> `MinimumTemperature`
- `WindSpeedMaximum` -> `MaximumWindSpeed`
- `TotalCloudCoverMinimum` -> `MinimumTotalCloudCover`
- `TotalCloudCoverMean` -> `MeanTotalCloudCover`
- `TotalCloudCoverMaximum` -> `MaximumTotalCloudCover`
- `WeatherDescription` -> `ShortText`
- `WindDirection`, `WindStrength`, `MoonPhase` and `WindDirectionAtMaxSpeed` are now translated into the language given by the `lang` parameter, or German by default; see `<ParameterName>_usedValues` in the JSON response for the possible values.
- The special values of `Moonrise`, `Moonset`, `Sunrise` and `Sunset` (e.g. "does not rise" or "does not set", relevant for arctic regions) are now translated as well; see `<ParameterName>_usedValues` in the JSON response for the possible values.

## premium package

- The momentary wind values in `Forecast_daily` were replaced by aggregated or derived values:
  - `WindDirection` -> `WindDirectionAtMaxSpeed`
  - `WindStrength` -> `MaximumWindStrength`
- `MaximumWindGust` was added to `Forecast_daily`.
- Changes in the names only:
  - `SunRise`, `SunSet`, `MoonRise`, and `Moonset` were renamed to `Sunrise`, `Sunset`, `Moonrise`, and `Moonset` respectively.
  - `SunshineDuration` was renamed to represent the aggregation period, for example `SunshineDuration_dailySum` or `SunshineDuration_6hourlySum`.
  - `TemperatureMaximum` -> `MaximumTemperature`
  - `TemperatureMinimum` -> `MinimumTemperature`
  - `FeltTemperatureMinimum` -> `MinimumFeltTemperature`

- `FeltTemperatureMaximum` -> `MaximumFeltTemperature`
- `RelativeHumidityMean` -> `MeanRelativeHumidity`
- `WindSpeedMaximum` -> `MaximumWindSpeed`
- `TotalCloudCoverMinimum` -> `MinimumTotalCloudCover`
- `TotalCloudCoverMean` -> `MeanTotalCloudCover`
- `TotalCloudCoverMaximum` -> `MaximumTotalCloudCover`
- `WeatherDescription` -> `ShortText`
- `TextForecast` -> `LongText`
- `WindDirection`, `WindStrength`, `MoonPhase` and `WindDirectionAtMaxSpeed` are now translated into the language given by the `lang` parameter, or German by default; see `<ParameterName>_usedValues` in the JSON response for the possible values.
- The special values of `Moonrise`, `Moonset`, `Sunrise` and `Sunset` (e.g. "does not rise" or "does not set", relevant for arctic regions) are now translated as well; see `<ParameterName>_usedValues` in the JSON response for the possible values.

## **coldweather package - renamed from winter package (!)**

- The momentary wind values in `Forecast_daily` were replaced by aggregated or derived values:
  - `WindDirection` -> `WindDirectionAtMaxSpeed`
  - `WindStrength` -> `MaximumWindStrength`
- `MaximumWindGust` was added to `Forecast_daily`.
- Changes in the names only:
  - `SunRise`, `SunSet`, `MoonRise`, and `Moonset` were renamed to `Sunrise`, `Sunset`, `Moonrise`, and `Moonset` respectively.
  - `SunshineDuration` was renamed to represent the aggregation period, for example `SunshineDuration_dailySum` or `SunshineDuration_6hourlySum`.
  - `TemperatureMaximum` -> `MaximumTemperature`
  - `TemperatureMinimum` -> `MinimumTemperature`
  - `FeltTemperatureMinimum` -> `MinimumFeltTemperature`

- `FeltTemperatureMaximum` -> `MaximumFeltTemperature`
- `RelativeHumidityMean` -> `MeanRelativeHumidity`
- `WindSpeedMaximum` -> `MaximumWindSpeed`
- `WeatherDescription` -> `ShortText`
- `TextForecast` -> `LongText`
- New variables in `Forecast_daily` block:
  - `TextForecast`
  - `MaximumWetBulbTemperature`
  - `MinimumWetBulbTemperature`
  - `MinimumTotalCloudCover`
  - `MeanTotalCloudCover`
  - `MaximumTotalCloudCover`
- New variables in `Forecast_hourly` block:
  - `DownwardShortWaveRadiation`
  - `DewPointTemperature`
- `WindDirection`, `WindStrength`, `MoonPhase` and `WindDirectionAtMaxSpeed` are now translated into the language given by the `lang` parameter, or German by default; see `<ParameterName>_usedValues` in the JSON response for the possible values.
- The special values of `Moonrise`, `Moonset`, `Sunrise` and `Sunset` (e.g. "does not rise" or "does not set", relevant for arctic regions) are now translated as well; see `<ParameterName>_usedValues` in the JSON response for the possible values.

## a2 package

- Typo correction in `Current` block: `TotoalCloudCover` -> `TotalCloudCover`
- The momentary wind values in `Forecast_daily` were replaced by aggregated or derived values:
  - `WindDirection` -> `WindDirectionAtMaxSpeed`
  - `WindStrength` -> `MaximumWindStrength`
- `MaximumWindGust` was added to `Forecast_daily`.
- Changes in the names only:

- `SunRise` , `SunSet` , `MoonRise` , and `Moonset` were renamed to `Sunrise` , `Sunset` , `Moonrise` , and `Moonset` respectively.
- `SunshineDuration` was renamed to represent the aggregation period, for example `SunshineDuration_dailySum` or `SunshineDuration_6hourlySum` .
- `TemperatureMaximum` -> `MaximumTemperature`
- `TemperatureMinimum` -> `MinimumTemperature`
- `FeltTemperatureMinimum` -> `MinimumFeltTemperature`
- `FeltTemperatureMaximum` -> `MaximumFeltTemperature`
- `RelativeHumidityMean` -> `MeanRelativeHumidity`
- `WindSpeedMaximum` -> `MaximumWindSpeed`
- `WeatherDescription` -> `ShortText`

## **solar24 package**

- Forecast block name changed: `Forecast_24h_hourly` -> `Forecast_hourly`

## **solarD9 package**

- Forecast block name changed: `Forecast_3_hourly` -> `Forecast_3hourly`
- `Forecast_3hourly` now contains data from the current time on, for the next 9 days.

## **stdaily package**

- Forecast block name changed: `forecast` -> `Forecast_daily`
- `ForecastDate` -> `ForecastTimes_LocalTime`
- `SurfaceTemperature` was changed to `MeanSeaSurfaceTemperature` .  
*It is only available on water and near shorelines.*

## **current package**

- Changes in the names only:
  - `SunRise` , `SunSet` , `MoonRise` , and `Moonset` were renamed to `Sunrise` , `Sunset` , `Moonrise` , and `Moonset` respectively.
  - `WeatherDescription` -> `ShortText`

- `WindDirection` , `WindStrength` and `MoonPhase` are now translated into the language given by the `lang` parameter, or German by default; see `<ParameterName>_usedValues` in the JSON response for the possible values.
- The special values of `Moonrise` , `Moonset` , `Sunrise` and `Sunset` (e.g. "does not rise" or "does not set", relevant for arctic regions) are now translated as well; see `<ParameterName>_usedValues` in the JSON response for the possible values.

## fctisl package

- `forecasts` block was renamed to `Forecast` .
- Location and time information were moved to `Info` , and the variable names were changed:
  - `lat` -> `Latitude`
  - `lon` -> `Longitude`
  - `alt` -> `Altitude_[m]`
  - `date` -> `Forecast_Calculated.UTC` and `Forecast_Calculated_LocalTime`
- `WindStrength` was added.
- `WindDirection` , `WindStrength` and `MoonPhase` are now translated into the language given by the `lang` parameter, or German by default; see `<ParameterName>_usedValues` in the JSON response for the possible values.
- The special values of `Moonrise` , `Moonset` , `Sunrise` and `Sunset` (e.g. "does not rise" or "does not set", relevant for arctic regions) are now translated as well; see `<ParameterName>_usedValues` in the JSON response for the possible values.
